Introduction	i
Special Civil Engineer Examination – Seismic Principles Test Plan	xvii
California Special Civil P.E. Seismic Principles Examination Statistics	xxi

Part 1 – Lecture Notes

Chapter 1 - Earthquake Characteristics

1.1 Nature of Earthquakes	1-1
1.2 Earthquake Faults	1-2
<input type="checkbox"/> Fault Types	1-2
<input type="checkbox"/> Surface Rupture	1-2
<input type="checkbox"/> Seismic Sea Waves	1-2
1.3 Seismic Waves	1-3
<input type="checkbox"/> Compression Waves (P-waves)	1-3
<input type="checkbox"/> Shear Waves (S-waves)	1-3
<input type="checkbox"/> Surface Waves (Love and Rayleigh)	1-3
<input type="checkbox"/> Peak Ground Acceleration (PGA)	1-4
<input type="checkbox"/> Effective Peak Ground Acceleration (EPGA)	1-4
1.4 Earthquake Damage	1-4
1.5 Earthquake Strength	1-4
<input type="checkbox"/> Magnitude, M	1-4
<input type="checkbox"/> Energy Release, E	1-5
1.6 Earthquake Intensity	1-5
<input type="checkbox"/> Modified Mercalli Intensity Scale, MM	1-5
<input type="checkbox"/> Attenuation	1-7

Chapter 2 - Vibration Theory

2.1 Single Degree of Freedom (SDOF) Systems.....	1-9
<input type="checkbox"/> Stiffness, K	1-9
<input type="checkbox"/> Angular Natural Frequency, ω	1-10
<input type="checkbox"/> Linear Natural Frequency, f	1-10
<input type="checkbox"/> Natural Period, T	1-10
2.2 Multiple Degree of Freedom (MDOF) Systems	1-10

2.3 Structural Damping	1-11
<input type="checkbox"/> Damping, B	1-11
<input type="checkbox"/> Critical Damping, $B_{critical}$	1-11
<input type="checkbox"/> Damping Ratio, β	1-12
<input type="checkbox"/> Damped Period of Vibration, T_d	1-12
2.4 Spectral Response	1-12
<input type="checkbox"/> Spectral Acceleration, S_a	1-12
<input type="checkbox"/> Spectral Velocity, S_v	1-12
<input type="checkbox"/> Spectral Displacement, S_d	1-12
<input type="checkbox"/> Response Spectrum	1-12
<input type="checkbox"/> Response Spectra	1-14
<input type="checkbox"/> Resonance	1-16
2.5 Base Shear, V	1-16
 Chapter 3 - General Provisions and Seismic Design Criteria	
3.1 IBC Chapter 1 – Administration	1-17
<input type="checkbox"/> Intent	1-17
<input type="checkbox"/> Referenced Codes and Standards	1-17
3.2 IBC Chapter 3 – Use & Occupancy Classification	1-17
<input type="checkbox"/> Classification	1-17
3.3 IBC Chapter 16 – Structural Design	1-18
<input type="checkbox"/> General	1-18
<input type="checkbox"/> Construction Documents	1-18
<input type="checkbox"/> Earthquake Design Data	1-18
3.4 IBC §1604 – General Design Requirements	1-19
<input type="checkbox"/> General	1-19
<input type="checkbox"/> Strength	1-19
<input type="checkbox"/> Serviceability	1-19
<input type="checkbox"/> Analysis	1-19
<input type="checkbox"/> Rationality	1-19
<input type="checkbox"/> Lateral Load Path	1-20
<input type="checkbox"/> Occupancy Category	1-20
<input type="checkbox"/> Wind and Seismic Detailing	1-21
3.5 IBC §1613 – Earthquake Loads	1-21
<input type="checkbox"/> Scope	1-21
<input type="checkbox"/> Purpose	1-22
3.6 IBC – Seismic Ground Motion Values	1-23
<input type="checkbox"/> Mapped MCE Acceleration Parameters, S_S & S_1	1-23
<input type="checkbox"/> Site Class (A to F)	1-24
<input type="checkbox"/> Site Class Adjusted MCE Acceleration Parameters, S_{MS} & S_{M1}	1-25
<input type="checkbox"/> Design Spectral Response Acceleration Parameters, S_{DS} & S_{D1}	1-25

□	Determination of Seismic Design Category, SDC	1-26
▪	Alternative Seismic Design Category Determination	1-30
▪	Simplified Design Procedure	1-30
3.7	ASCE 7 Seismic Design Criteria	1-30
□	Scope	1-30
□	Applicability	1-30
□	Seismic Importance Factor, I	1-30
□	Seismic Design Category A	1-31
▪	Base Shear, V	1-31
▪	Vertical Distribution of Lateral Force, F_x	1-31
▪	Diaphragm Design Force, F_{px}	1-31
▪	Load Path Connections	1-31
▪	Anchorage of Concrete or Masonry Walls	1-32
Chapter 4 - Seismic Design Requirements for Building Structures		
4.1	ASCE 7 – Chapter 12 Overview	1-33
4.2	Seismic-Force-Resisting Elements	1-33
□	Horizontal Elements of a Seismic-Force-Resisting System (SFRS)	1-33
□	Vertical Elements of a Seismic-Force-Resisting System (SFRS)	1-33
▪	Shear Walls	1-33
▪	Braced Frames	1-33
▪	Moment-Resisting Frames	1-33
4.3	Structural System Selection	1-34
□	Selection and Limitations	1-34
▪	Bearing Wall System	1-34
▪	Building Frame System	1-34
▪	Moment-Resisting Frame System	1-35
▪	Dual System	1-35
▪	Shear Wall-Frame Interactive System	1-35
▪	Cantilever Column System	1-35
▪	Steel Systems Not Specifically Detailed for Seismic Resistance	1-35
□	Determination of Seismic Factors	1-36
▪	Response Modification Factor, R	1-36
▪	System Overstrength Factor, Ω_0	1-37
□	Combination of Framing Systems in the Same Direction	1-38
▪	Vertical Combinations	1-38
▪	Horizontal Combinations	1-39
4.4	Building Height Limits	1-39
4.5	Configuration Irregularities	1-39
□	Irregular and Regular Classification	1-39
□	Horizontal Irregularity	1-40
□	Vertical Irregularity	1-40
□	Limitations for Systems with Structural Irregularities	1-40
▪	Seismic Design Category B & C	1-40

▪ Seismic Design Category D	1-40
▪ Seismic Design Category E & F	1-40
4.6 Analysis Procedure Selection	1-43
<input type="checkbox"/> Equivalent Lateral Force (ELF)	1-43
<input type="checkbox"/> Dynamic Analysis	1-43
<input type="checkbox"/> Simplified Design	1-43
<input type="checkbox"/> ASCE 7 – Table 12.6-1	1-43
4.7 Seismic Isolation & Damping Systems	1-44
<input type="checkbox"/> General	1-44
<input type="checkbox"/> Seismic Isolation	1-44
<input type="checkbox"/> Damping Systems	1-45
4.8 Modeling Criteria	1-45
<input type="checkbox"/> Foundation Modeling	1-45
<input type="checkbox"/> Effective Seismic Weight, W	1-45
▪ Effective Seismic Weight of a Level, w_x	1-45
<input type="checkbox"/> Structural Modeling	1-46
<input type="checkbox"/> Interaction Effects	1-46
4.9 Equivalent Lateral Force Procedure	1-47
<input type="checkbox"/> Seismic Base Shear, V	1-47
▪ Seismic Response Coefficient, C_S	1-47
<input type="checkbox"/> Period Determination, T	1-48
▪ Approximate Fundamental Period, T_a	1-49
4.10 Actual vs. Design Seismic Forces	1-49
4.11 Vertical Distribution of Seismic Forces	1-51
<input type="checkbox"/> Vertical Distribution of Seismic Forces, F_x	1-51
<input type="checkbox"/> Story Shear, V_x	1-52
<input type="checkbox"/> Overturning Moment, OTM_x	1-52
4.12 Story Drift Determination	1-53
<input type="checkbox"/> Calculated Deflection of a Level, δ_x	1-53
<input type="checkbox"/> Calculated Story Drift, Δ_x	1-53
<input type="checkbox"/> Period for Computing Drift, T	1-54
<input type="checkbox"/> Story Drift Limit, Δ_{ax}	1-54
4.13 P-Delta Effects	1-55
4.14 Building Separation	1-56
<input type="checkbox"/> Buildings on the Same Property, Δ_{MT}	1-56
<input type="checkbox"/> Buildings Adjoining a Property Line, Δ_M	1-57
4.15 Deformation Compatibility	1-57
<input type="checkbox"/> Seismic Design Category D, E or F	1-57

4.16 Horizontal Cantilevers	1-57
□ Seismic Design Category D, E or F	1-57
4.17 Direction of Loading	1-57
□ Orthogonal Effects	1-57
▪ Seismic Design Category B	1-57
▪ Seismic Design Category C	1-57
▪ Seismic Design Category D, E & F	1-58
4.18 Simplified Design Procedure	1-59
□ Seismic Design Category (SDC)	1-59
□ Seismic Base Shear, V	1-60
□ Vertical Distribution, F_x	1-60
□ Diaphragms, F_{px}	1-61
□ Horizontal Distribution of Shear, V_x	1-61
▪ Flexible Diaphragm Structures	1-61
▪ Rigid Diaphragm Structures	1-61
□ Overturning	1-61
□ Drift Limits	1-62
□ Building Separations	1-62
□ Specific Requirements & References	1-62

Chapter 5 - Seismic Load Effects and Load Combinations

5.1 Seismic Load Effects	1-63
□ Horizontal Seismic Load Effect, E_h	1-64
□ Vertical Seismic Load Effect, E_v	1-64
□ Redundancy Factor, ρ	1-64
▪ Redundancy Factor for Seismic Design Category D, E or F	1-65
□ Seismic Load Effect Including Overstrength Factor, Ω_0	1-65
▪ Horizontal Seismic Load Effect with Overstrength Factor, E_{mh}	1-66
5.2 Load Combinations	1-66
□ General	1-66
□ Notations	1-66
□ Strength Design or Load & Resistance Factor Design	1-67
▪ Basic (SD or LRFD) Load Combinations	1-67
□ Allowable Stress Design	1-67
▪ Basic (ASD) Load Combinations	1-67
▪ Alternate Basic (ASD) Load Combinations	1-68
□ Load Combinations with Overstrength Factor	1-68
▪ Basic (SD or LRFD) Load Combinations with Overstrength Factor	1-68
▪ Basic (ASD) Load Combinations with Overstrength Factor	1-68
○ ASD Increase for Load Combinations with Overstrength	1-69
▪ Cantilever Column Systems	1-69
▪ Elements Supporting Discontinuous Walls or Frames	1-69
▪ Collector Elements for SDC = C, D, E or F	1-69
5.3 Equivalent Lateral Force (ELF) Procedure Overview	1-69

Chapter 6 - Seismic Design Requirements for Nonstructural Components

6.1 ASCE 7 – Chapter 13 Overview	1-71
<input type="checkbox"/> Scope	1-71
<input type="checkbox"/> Seismic Design Category (SDC)	1-71
<input type="checkbox"/> Component Importance Factor, I_p	1-71
<input type="checkbox"/> Exemptions	1-71
<input type="checkbox"/> General Design Requirements	1-72
<input type="checkbox"/> Construction Documents	1-72
6.2 Seismic Demands on Nonstructural Components	1-72
<input type="checkbox"/> Design Seismic Force, F_p	1-72
<input type="checkbox"/> Vertically Cantilevered Systems	1-73
<input type="checkbox"/> Component Amplification Factor, a_p	1-73
<input type="checkbox"/> Rigid Component	1-74
<input type="checkbox"/> Flexible Component	1-74
<input type="checkbox"/> Component Response Modification Factor, R_p	1-74
<input type="checkbox"/> Seismic Relative Displacements	1-74
6.3 Nonstructural Component Anchorage	1-74
<input type="checkbox"/> Design Forces	1-74
<input type="checkbox"/> Anchors in Concrete or Masonry	1-74
6.4 Architectural Components	1-75
<input type="checkbox"/> General	1-75
<input type="checkbox"/> Forces and Displacements	1-75
<input type="checkbox"/> Specific Requirements & References	1-75
6.5 Mechanical & Electrical Components	1-75
<input type="checkbox"/> General	1-76
<input type="checkbox"/> Component Period, T_p	1-76
<input type="checkbox"/> Specific Requirements & References	1-76
6.6 Structural Walls and Their Anchorage	1-77
<input type="checkbox"/> Design for Out-of-Plane Forces	1-77
<input type="checkbox"/> Anchorage of Concrete or Masonry Structural Walls	1-79
<input type="checkbox"/> Anchorage to Flexible Diaphragms	1-79
<input type="checkbox"/> Additional Requirements for SDC = C, D, E or F	1-79
<input type="checkbox"/> Toe Nails	1-80
<input type="checkbox"/> Cross-Grain Tension & Cross-Grain Bending	1-81

Chapter 7 - Seismic Design Requirements for Nonbuilding Structures

7.1 ASCE 7 – Chapter 15 Overview	1-85
<input type="checkbox"/> Nonbuilding Structures	1-85
<input type="checkbox"/> Structural Analysis Procedure	1-86

▪ Nonbuilding Structures Similar to Buildings	1-86
▪ Nonbuilding Structures NOT Similar to Buildings.....	1-86
□ Nonbuilding Structures Supported by Other Structures	1-86
□ Architectural, Mechanical & Electrical Components	1-86
7.2 Structural Design Requirements	1-86
□ Design Basis	1-86
□ Importance Factor, I	1-87
□ Effective Seismic Weight, W	1-87
□ Fundamental Period, T	1-87
□ Rigid Nonbuilding Structures	1-88
▪ Seismic Base Shear, V	1-88
□ Specific Requirements & References	1-88
7.3 Nonbuilding Structures Similar to Buildings	1-88
□ General	1-88
□ Determination of Seismic Factors	1-89
□ Seismic Base Shear, V	1-89
▪ Seismic Response Coefficient, C_S	1-89
□ Specific Requirements & References	1-90
7.4 Nonbuilding Structures NOT Similar to Buildings	1-90
□ General	1-90
□ Determination of Seismic Factors	1-91
□ Seismic Base Shear, V	1-91
▪ Seismic Response Coefficient, C_S	1-91
□ Specific Requirements & References	1-92
7.5 Tanks and Vessels	1-92
□ General	1-92
□ Specific Requirements & References	1-93
 Chapter 8 - Diaphragm Design & Wall Rigidity	
8.1 Diaphragm Design	1-95
□ Diaphragm Design Force, F_{px}	1-95
8.2 Diaphragm Types	1-98
□ Diaphragm Flexibility	1-98
□ Flexible Diaphragm Condition	1-98
□ Calculated Flexible Diaphragm Condition	1-98
□ Rigid Diaphragm Condition	1-98
□ Diaphragm Deflection	1-98
□ Flexible Diaphragm	1-99
□ Rigid Diaphragm	1-99
8.3 Flexible Diaphragm Analysis	1-100
8.4 Chord Force	1-103

8.5 Drag Force	1-104
<input type="checkbox"/> Collector Elements	1-105
▪ Seismic Design Category C, D, E or F	1-105
8.6 Masonry & Concrete Wall Rigidity	1-105
<input type="checkbox"/> Cantilever Wall - Deflection	1-105
<input type="checkbox"/> Wall Rigidity, R	1-105
<input type="checkbox"/> Fixed Wall – Deflection	1-106
<input type="checkbox"/> Shear Wall with Openings	1-106
8.7 Rigid Diaphragm Analysis	1-107
<input type="checkbox"/> Horizontal Distribution of Forces	1-107
<input type="checkbox"/> Center of Mass, CM	1-108
<input type="checkbox"/> Center of Rigidity, CR	1-108
<input type="checkbox"/> Inherent Torsion	1-108
▪ Calculated Eccentricity, e_x & e_y	1-108
▪ Inherent Torsional Moment, M_t	1-109
<input type="checkbox"/> Accidental Torsion	1-109
▪ Accidental Eccentricity	1-109
▪ Accidental Torsional Moment, M_{ta}	1-109
<input type="checkbox"/> Amplification of Accidental Torsional Moment	1-109
▪ Seismic Design Category C, D, E or F	1-109
<input type="checkbox"/> Design Torsional Moments, M_T	1-110
▪ Direct Shear	1-110
▪ Torsional Shear	1-110
<input type="checkbox"/> Torsion (X -Direction)	1-111
<input type="checkbox"/> Torsion (Y -Direction)	1-112
8.8 Rigid Diaphragm Analysis Summary	1-113
 Chapter 9 - IBC Chapter 23 - Wood	
9.1 General	1-115
<input type="checkbox"/> Scope	1-115
<input type="checkbox"/> General Design Requirements	1-115
9.2 Lateral-Force-Resisting Systems	1-115
<input type="checkbox"/> General	1-115
<input type="checkbox"/> Design Requirements	1-115
<input type="checkbox"/> Boundary Elements	1-115
<input type="checkbox"/> Toe-Nailed Connections	1-115
<input type="checkbox"/> Openings in Shear Panels	1-117
9.3 Wood-Frame Diaphragms	1-117
<input type="checkbox"/> Application Requirements	1-117
<input type="checkbox"/> Deflection	1-117
<input type="checkbox"/> Unit Shear Capacities	1-117
▪ Allowable Stress Design (ASD)	1-117
▪ Load and Resistance Factor Design	1-117

<input type="checkbox"/>	Diaphragm Aspect Ratios	1-118
<input type="checkbox"/>	Horizontal Distribution of Shear	1-118
<input type="checkbox"/>	Diaphragm Assemblies	1-118
<input type="checkbox"/>	Wood Structural Panel Diaphragms	1-118
9.4	Wood Structural Panel Horizontal Diaphragms	1-120
9.5	Wood-Frame Shear Walls	1-121
<input type="checkbox"/>	Application Requirements	1-121
<input type="checkbox"/>	Deflection	1-121
<input type="checkbox"/>	Unit Shear Capacities	1-121
<input type="checkbox"/>	Allowable Stress Design (ASD)	1-122
<input type="checkbox"/>	Load and Resistance Factor Design	1-122
<input type="checkbox"/>	Unblocked Wood Structural Panel Shear Walls	1-122
<input type="checkbox"/>	Shear Wall Aspect Ratios	1-122
<input type="checkbox"/>	Shear Wall Types	1-123
<input type="checkbox"/>	Individual Full-Height Wall Segments	1-123
<input type="checkbox"/>	Force-Transfer Shear Walls	1-123
<input type="checkbox"/>	Perforated Shear Walls	1-123
<input type="checkbox"/>	Construction Requirements	1-123
<input type="checkbox"/>	Framing Requirements	1-123
<input type="checkbox"/>	Sheathing	1-123
<input type="checkbox"/>	Fasteners	1-124
<input type="checkbox"/>	Shear Wall Anchorage and Load Path	1-124
9.6	Wood Structural Panel Shear Walls	1-124
<input type="checkbox"/>	Wood Structural Panel Shear Walls	1-124
<input type="checkbox"/>	Allowable Stress Design (ASD)	1-125
<input type="checkbox"/>	Allowable Unit Wall Shear Reduction	1-125
<input type="checkbox"/>	Seismic Design Category D, E or F	1-125
<input type="checkbox"/>	Foundation Sill Bolts	1-125
9.7	Shear Wall Overturning	1-128
<input type="checkbox"/>	Tension & Compression Chords	1-129
<input type="checkbox"/>	Uplift Anchorage at Shear Wall Ends	1-129
<input type="checkbox"/>	Allowable Stress Design (ASD)	1-129
<input type="checkbox"/>	Hold-Downs	1-130
9.8	Connections and Fasteners	1-135
<input type="checkbox"/>	Fastener Requirements	1-135
<input type="checkbox"/>	Load Path	1-135
<input type="checkbox"/>	Nail Types	1-136
9.9	Subdiaphragms	1-138
<input type="checkbox"/>	Transfer of Anchorage Forces into Diaphragms	1-138

Chapter 10 - IBC - Other Material Chapters

10.1 IBC Chapter 18 – Soils and Foundations	1-143
□ General	1-143
▪ Design Basis	1-143
□ Geotechnical Investigations	1-143
▪ General	1-143
▪ Investigations Required	1-143
▪ Basis of Investigation	1-143
▪ Qualified Representative	1-143
▪ Investigated Conditions	1-143
▪ Reporting	1-144
□ Foundations	1-144
▪ General	1-144
▪ Design Loads	1-144
▪ Concrete Foundations	1-145
▪ Seismic Requirements	1-145
□ Shallow Foundations	1-145
▪ General	1-145
▪ Footing Seismic Ties	1-145
▪ Slab-On-Grade Footings	1-146
▪ Stemwall Footings	1-146
10.2 IBC Chapter 19 – Concrete	1-147
□ General	1-147
□ Special Moment Frames (SMF)	1-147
▪ Hoop	1-148
▪ Confinement	1-148
▪ Strong Column - Weak Beam Design	1-148
□ Intermediate Moment Frames (IMF)	1-148
□ Ordinary Moment Frames (OMF)	1-148
□ Special Reinforced Concrete Shear Walls	1-148
▪ Boundary Elements	1-149
□ Ordinary Reinforced Concrete Shear Walls	1-149
10.3 IBC Chapter 21 – Masonry	1-149
□ Design Methods	1-149
□ Seismic Design Requirements for Masonry	1-149
▪ Vertical Reinforcement	1-149
▪ Horizontal Reinforcement	1-149
□ Special Reinforced Masonry Shear Walls	1-149
□ Intermediate Reinforced Masonry Shear Walls	1-150
□ Ordinary Reinforced Masonry Shear Walls	1-150
10.4 IBC Chapter 22 – Steel	1-151
□ General	1-151
□ Seismic Requirements for Steel Structures	1-151
▪ Seismic Design Category A, B or C	1-151

▪ Seismic Design Category D, E or F	1-151
□ Seismic Requirements for Composite Construction	1-151
□ Special Moment Frames (SMF)	1-151
▪ Doubler Plates	1-152
▪ Continuity Plates	1-152
□ Intermediate Moment Frames (IMF)	1-153
□ Ordinary Moment Frames (OMF).....	1-153
□ Special Truss Moment Frames (STMF)	1-153
□ Special Concentrically Braced Frames (SCBF)	1-153
□ Ordinary Concentrically Braced Frames (OCBF)	1-153
□ Eccentrically Braced Frames (EBF)	1-154
▪ Link Beam	1-154
□ Buckling-Restrained Braced Frames (BRBF)	1-154
□ Special Plate Shear Walls (SPSW)	1-154

Chapter 11 - IBC - Inspection & Observation Requirements

11.1 General Inspections	1-155
□ General	1-155
□ Required Inspections	1-155
11.2 Structural Tests and Special Inspections	1-155
Scope	1-155
11.3 Special Inspections	1-155
□ General	1-156
▪ Statement of Special Inspections	1-156
▪ Report Requirement	1-156
▪ Strong Column - Weak Beam Design	1-156
□ Types of Work	1-157
11.4 Statement of Special Inspections	1-158
□ General	1-158
□ Content of Statement of Special Inspections	1-158
□ Seismic Resistance	1-158
▪ Statement of Special Inspections	1-159
11.5 Special Inspections for Seismic Resistance	1-160
11.6 Structural Testing for Seismic Resistance	1-160
11.7 Structural Observation	1-160
□ General	1-161
□ Structural Observations for Seismic Resistance	1-161

Chapter 12 - Organizations, Codes & Standards

12.1 Organizations	1-163
□ National Earthquake Hazards Reduction Program (NEHRP)	1-163
□ American Society of Civil Engineers (ASCE)	1-163

<input type="checkbox"/> International Code Council (ICC)	1-164
<input type="checkbox"/> Structural Engineers Association of California (SEAOC)	1-164
<input type="checkbox"/> Applied Technology Council (ATC)	1-164
12.2 Building Codes & Standards	1-165
<input type="checkbox"/> FEMA 450 & FEMA P-750	1-165
<input type="checkbox"/> ASCE 7-05	1-165
<input type="checkbox"/> International Building Code (IBC)	1-165
<input type="checkbox"/> International Residential Code (IRC)	1-165
<input type="checkbox"/> California Building Standards Code	1-166
<input type="checkbox"/> California Building Code (CBC)	1-166
<input type="checkbox"/> California Residential Code (CRC)	1-167
<input type="checkbox"/> California Existing Building Code (CEBC).....	1-167
<input type="checkbox"/> California Historic Building Code (CHBC).....	1-167
<input type="checkbox"/> SEAOC Blue Book	1-167
<input type="checkbox"/> Performance Based Seismic Design	1-167
 Chapter 13 - Structural Damage & Retrofit	
13.1 Seismic Performance of Existing Structures	1-169
<input type="checkbox"/> Unreinforced Masonry (URM) Buildings	1-169
<input type="checkbox"/> Non-Ductile Concrete Frames & Bridges (pre 1976)	1-170
<input type="checkbox"/> Precast Concrete Structures	1-171
<input type="checkbox"/> Concrete Tilt-Up Buildings.....	1-172
<input type="checkbox"/> Flat Slab (or Lift Slab) Concrete Buildings	1-173
<input type="checkbox"/> Welded Steel Moment Frames	1-174
<input type="checkbox"/> Steel (and Concrete) Moment Frames with URM Infill Walls	1-175
<input type="checkbox"/> Steel Braced Frames	1-175
<input type="checkbox"/> Residential Wood Frame Buildings	1-176
<input type="checkbox"/> Liquid Filled Steel Tanks	1-177
13.2 Retrofit of Existing Structures	1-177
13.3 Seismic Legislation	1-178
<input type="checkbox"/> Alquist-Priolo Earthquake Fault Zoning Act	1-178
<input type="checkbox"/> Seismic Hazards Mapping Act	1-178
 Chapter 14 - Geotechnical Issues & Lifelines	
14.1 Liquefaction	1-179
14.2 Slope Stability	1-180
14.3 Retaining Walls	1-180
<input type="checkbox"/> General	1-181
<input type="checkbox"/> Design Lateral Soil Loads	1-181
<input type="checkbox"/> Mononobe-Okabe Solution	1-181
<input type="checkbox"/> Safety Factor	1-181

14.4 Lifelines	1-182
<input type="checkbox"/> Pipelines Crossing Faults	1-182
<input type="checkbox"/> Redundancy	1-183
Chapter 15 - Professional Engineers Act	
15.1 Practice Acts	1-185
15.2 Title Acts	1-185
15.3 Title Authorities	1-185
<input type="checkbox"/> Structural Engineer	1-186
15.4 Civil Engineering	1-186
<input type="checkbox"/> Defined	1-186
<input type="checkbox"/> Exemptions	1-186
<input type="checkbox"/> Responsible Charge	1-187
<input type="checkbox"/> Practice Within Area of Competence	1-187
15.5 Post-Earthquake Safety Evaluation	1-187
<input type="checkbox"/> Good Samaritan Immunity	1-190

Part 2 – Example Problems

Problem #1 – <i>Two Inverted Pendulum SDOF Structures</i>	2-1
Problem #2 – <i>Three Column SDOF Bridge Structure</i>	2-3
Problem #3 – <i>Two Column SDOF Bridge Structure (shear & bending)</i>	2-5
Problem #4 – <i>3-Story Special Steel Concentrically Braced Frames ($T < T_s$)</i>	2-6
Problem #5 – <i>5-Story Reinforced Concrete SMF ($T > T_s$)</i>	2-8
Problem #6 – <i>2-Story Wood Structural Panel Shear Wall ($T < T_s$)</i>	2-10
Problem #7 – <i>8-Story Dual System (Steel EBF & Steel SMF, $T < T_s$)</i>	2-12
Problem #8 – <i>Vertical Distribution of Seismic Force (F_x), Story Shear (V_x), Overtaking Moment (OTM_x) & Diaphragm Design Force (F_{px})</i>	2-14
Problem #9 – <i>Maximum Period (T) & Minimum Seismic Base Shear (V)</i>	2-17
Problem #10 – <i>Design Story Drift (Δ_x) and Allowable Story Drift (Δ_{ax})</i>	2-19
Problem #11 – <i>Redundancy Factor (ρ) Determination</i>	2-20
Problem #12 – <i>Load Combinations on Lateral-Force-Resisting Elements</i>	2-22
Problem #13 – <i>Anchorage of Masonry Structural Walls</i>	2-25
Problem #14 – <i>Mechanical Component and Nonbuilding Structure (Tank) Anchorage</i>	2-28
Problem #15 – <i>Wood Structural Panel Roof Diaphragm & Shear Walls</i>	2-31
Problem #16 – <i>Flexible (Metal Deck) Roof Diaphragm with Masonry Shear Walls</i>	2-37
Problem #17 – <i>Single-Story Flexible Diaphragm with Interior Shear Wall</i>	2-41

Problem #18 – <i>Concrete Shear Wall & Steel SMF Interaction</i>	2-44
Problem #19 – <i>Single-Story Rigid Diaphragm (CM & CR given)</i>	2-46
Problem #20 – <i>Single-Story Rigid Diaphragm (CM & CR calculations)</i>	2-50
Problem #21 – <i>Concrete Cantilever Retaining Wall with Seismic Loads</i>	2-56

Part 3 – Multiple Choice Problems

Part 4 – Multiple Choice Solutions

Part 5 – Appendix & Index

Appendix A – Definitions	5-1
Appendix B – Notations	5-11
Appendix C – Approximate Fundamental Period, T_a	5-15
Appendix D – Relative Rigidities of Concrete & Masonry Shear Walls / Piers	5-17
Index	5-21
